

# TIRENIFY

## 6-Month Financial Projection & Capital Requirements

July 2026 - December 2026

---

### EXECUTIVE SUMMARY

Tirenify is requesting capital to accelerate Phase 1 growth (email breach awareness) and launch Phase 2 (real-time alerts, dark web monitoring, SIM swap detection). With proper capital, I can grow from 0 active users to 2,500+ users and establish sustainable revenue streams by December 2026.

**Capital Required:** £2,000 - £5,000 (~~~₦~~3.6M - ~~₦~~9.1M) **Timeline:** 6 months (July - December 2026) **Expected Outcome:** 2,500+ users, ₦100K+/month revenue trajectory, Phase 2 beta validated, Korey hired and productive

---

### CURRENT SITUATION & CONSTRAINTS

#### Where Tirenify Stands (June 2026)

- **Product Status:** Phase 1 (breach checker) is live and functional
- **Deployment:** Live on Vercel (<https://breachchecker-rho.vercel.app/>)
- **Funding:** Zero capital deployed
- **Marketing:** Zero paid marketing (organic only)
- **Team:** Solo founder (Daniel Adeleye, student at FUTA, Industrial Engineering)
- **Revenue:** Zero revenue to date
- **Current Funding:** Freelance web development work
- **Infrastructure:** Limited internet, data-constrained environment in Lagos, Nigeria
- **Resources:** No co-founder, no team, no external advisors
- **Operations:** Free/low-cost infrastructure (Railway free tier, Netlify free tier, free Claude access)

#### Why Capital Is Critical

##### Without Capital:

- Growth is limited to organic outreach (manual, slow)
- No paid marketing (cannot afford ads)

- No paid tools (limited to free tiers of Claude, Figma)
- I must continue full-time freelancing (divides focus from Tirenify)
- Cannot hire Korey (no runway to pay salary)
- Limited by free-tier infrastructure constraints

#### **With Capital:**

- Hire Korede (backend developer) and accelerate product development
  - Invest in user acquisition (paid ads, partnerships)
  - Access paid tools and faster infrastructure
  - Focus 100% on Tirenify (reduce/eliminate freelance work)
  - Build professional brand (premium domain, hosting, marketing)
  - Establish runway for operations (6 months minimum)
- 

## **MARKET OPPORTUNITY & PROBLEM VALIDATION**

### **The Problem**

- **Scale:** 1 billion+ Africans online (estimated 650M+ across continent)
- **Gap:** Zero affordable, locally-built digital security tools
- **Urgency:** Daily breaches—SIM swaps, BVN leaks, phishing attacks, account takeovers
- **Impact:** Users have no way to know if their data is compromised
- **Western Tools:** Experian, LifeLock, Norton don't serve Africa
- **Local Solutions:** No local alternatives exist
- **Price Expectation:** African consumers expect ≤\$2-3/month (₦2,716-4,074 or ~₦2.7-4K)

### **Market Size**

- **TAM (Total Addressable Market):** 650M+ African internet users
- **SAM (Serviceable Addressable Market):** 50M+ users in Nigeria, Kenya, South Africa, Ghana
- **SOM (Serviceable Obtainable Market):** 2,500+ users by Dec 2026, 50,000+ by end of 2027

### **Why Tirenify Can Win**

- **Built in Africa, for Africa:** Understands local problems, payment systems, infrastructure
- **First-mover:** No established competitor in African breach awareness space
- **Freemium Model:** Low friction entry point

- **Privacy-First:** Data not sold, not stored, not tracked
- **Real Problem:** Breach exposure is urgent and growing daily
- **Cultural Understanding:** Built by someone who lives the problem

---

## FUNDING REQUIREMENTS & USE OF CAPITAL

### Total Capital Required

**Recommended:** £2,500 (~~~£~~4.56M)

**Range:** £2,000 - £5,000 (~~~£~~3.6M - ~~£~~9.1M)

### Monthly Breakdown (Assumes £2,500 Capital)

| Item                 | July  | Aug   | Sep   | Oct   | Nov   | Dec   | Total   |
|----------------------|-------|-------|-------|-------|-------|-------|---------|
| Korey Salary         | £30K  | £35K  | £35K  | £40K  | £40K  | £40K  | £220K   |
| Infrastructure       | £28K  | £28K  | £33K  | £38K  | £38K  | £38K  | £203K   |
| Marketing /Ads       | £40K  | £50K  | £60K  | £70K  | £75K  | £80K  | £375K   |
| Living Expenses      | £30K  | £30K  | £30K  | £30K  | £30K  | £30K  | £180K   |
| Tools/ Software      | £15K  | £15K  | £15K  | £15K  | £15K  | £15K  | £90K    |
| Contingency (5%)     | £7K   | £8K   | £9K   | £10K  | £10K  | £11K  | £55K    |
| <b>TOTAL MONTHLY</b> | £150K | £166K | £182K | £203K | £208K | £214K | £1,123K |

**6-Month Total:** ~~£~~1,123K (~£616)

**Capital Buffer (for extended timeline, emergencies):** £1,884 (~~~£~~3.44M)

---

## LINE ITEM EXPLANATIONS

### 1. Korede Salary (~~£~~220K total)

**Why Korey is Critical:**

- I am a product thinker, not a backend engineer
- Phase 2 requires real-time monitoring, dark web integrations, database optimization

- I cannot build Phase 2 solo while also managing marketing and user acquisition
- Korey was identified from secondary school (existing trust, shared vision)
- Starting salary is modest (₦30-40K/month) because he understands the bootstrap phase

#### **Salary Progression:**

- July: ₦30K (while building Phase 2 infrastructure)
  - Aug-Sept: ₦35K (workload increases)
  - Oct-Dec: ₦40K (Phase 2 beta approaches launch)
- 

## **2. Infrastructure Costs (₦185K total)**

#### **Component Breakdown:**

- **Paid Hosting (Railway/Render):** ₦10K/month (eliminates cold starts of free tier)
- **Database (PostgreSQL):** ₦5K/month
- **Domain (tirenify.com):** ₦15-17K/year (~₦1.3-1.4K/month)
- **Email Service (SendGrid/Mailgun):** ₦3K/month (for alerts, notifications)
- **SSL/Security Certificates:** ₦0 (free via Let's Encrypt)
- **Monitoring/Analytics (Datadog/New Relic):** ₦3K/month
- **CDN (Cloudflare Pro):** ₦2K/month (faster global access)
- **Backup/Disaster Recovery:** ₦2K/month

#### **Why Required:**

- Free tiers have unpredictable performance and limits
  - Security product users expect fast, reliable service
  - Real-time alerts require stable infrastructure
  - Poor performance leads to user churn and lost credibility
- 

## **3. Marketing/Ads (₦375K total)**

#### **User Acquisition Strategy:**

- **Months 1-2:** Organic (Twitter, Reddit, WhatsApp) + partnerships (unpaid)
- **Months 3+:** Paid ads targeting specific segments

#### **Target Audiences:**

- Freelancers (Upwork, Fiverr communities)
- Cryptocurrency traders (Telegram, Discord)

- Students (Reddit r/Nigeria, Facebook groups)
- Business owners (LinkedIn, WhatsApp Business)

#### **Budget Allocation:**

- Twitter Ads: 40% (₦160K)
- Google Search Ads: 30% (₦112K)
- Facebook/Instagram: 20% (₦75K)
- Partnerships/Influencers: 10% (₦37K)

#### **User Acquisition Assumptions:**

- Target cost per user: ₦1-2
  - Budget of ₦375K should bring 200-400 paid users
  - Combined with organic: 2,500+ users by December
- 

### **4. Living Expenses (₦180K total)**

#### **Why This Is Minimal:**

- I am a student (shared housing, minimal lifestyle)
  - ₦30K/month = approximately ₦1K/day (survival level)
  - Covers: Food, transport, minimal rent contribution
  - I have zero financial buffer; without this, I return to full-time freelancing and Tirenify stalls
  - Realistic context: I would normally need ₦50-80K/month for comfortable living
  - With capital, I can live minimally and dedicate 100% of effort to Tirenify
- 

### **5. Tools/Software (₦90K total)**

#### **Monthly Software Costs:**

- **Claude Pro:** ₦5K/month (faster API access, priority support)
- **Figma Pro:** ₦0 (free tier sufficient for MVP)
- **Slack:** ₦5K/month (communication with Korey)
- **GitHub Pro:** ₦2K/month
- **Notion:** ₦0 (free tier adequate)
- **Airtable:** ₦2K/month (user tracking, feedback management)
- **Stripe/Payment Gateway:** ₦3K/month (for eventual monetization setup)
- **VPN/Security Tools:** ₦1K/month

- **Other Miscellaneous:** ₦2K/month

---

## 6. Contingency (5%)

### Flexibility Buffer for:

- Unexpected infrastructure scaling
  - Emergency developer assistance
  - Ad performance optimization adjustments
  - Payment processing and conversion fees
  - Equipment or emergency repairs
- 

## REVENUE PROJECTIONS

### Freemium Business Model

- **Free Tier:** Full access to breach checker
- **Premium Tier (Phase 2):** Real-time alerts, dark web monitoring, SIM swap detection
- **Pricing:** ₦1,000/month (£0.55) or ~~₦10,000/year~~ (£5.48)

### Projected Growth & Conversion

| Month     | Total Users | Free Users | Premium Users | Conversion Rate | Monthly Revenue     |
|-----------|-------------|------------|---------------|-----------------|---------------------|
| July      | 50          | 45         | 5             | 10%             | <del>₦5,000</del>   |
| August    | 150         | 135        | 15            | 10%             | <del>₦15,000</del>  |
| September | 400         | 360        | 40            | 10%             | <del>₦40,000</del>  |
| October   | 800         | 720        | 80            | 10%             | <del>₦80,000</del>  |
| November  | 1,500       | 1,350      | 150           | 10%             | <del>₦150,000</del> |
| December  | 2,500       | 2,200      | 300           | 12%             | <del>₦300,000</del> |

**6-Month Total Revenue:** ~~₦590,000~~

**Monthly Revenue by December:** ~~₦300,000 (~£164)~~

### Revenue Assumptions

- Phase 2 beta launches September (limited cohort of power users)
- Conversion starts at 10% (conservative for SaaS)
- Grows to 12% by December as product improves
- Average lifetime value per premium user: ~~₦12,000~~ (annual)

---

# THREE SCENARIOS

---

## SCENARIO A: BEST CASE (Optimistic but Achievable)

### Assumptions

- Capital deployed fully by July 15 (no delays)
- Paid ads perform exceptionally (1:1 cost-per-user)
- Korey delivers Phase 2 on schedule (September)
- Viral growth through word-of-mouth (2-3x organic multiplier)
- Premium conversion reaches 15% by December

### Projections

| Metric           | July  | Aug   | Sep   | Oct   | Nov   | Dec             |
|------------------|-------|-------|-------|-------|-------|-----------------|
| Users            | 100   | 300   | 800   | 1,500 | 3,000 | 5,000+          |
| Premium Users    | 15    | 45    | 120   | 225   | 450   | 750             |
| Monthly Revenue  | ₦15K  | ₦45K  | ₦120K | ₦225K | ₦450K | ₦750K           |
| Runway Remaining | ₦2.4M | ₦2.3M | ₦2.1M | ₦1.8M | ₦1.3M | Self-sufficient |

### Outcome by December

- 5,000+ users (2x target)
- ₦750K/month revenue (2.5x target)
- Fully funded through year-end
- Can hire second developer for Phase 3
- Ready for enterprise sales (Phase 4)

**Probability:** 20%

---

## SCENARIO B: EXPECTED CASE (Realistic, Most Likely)

### Assumptions

- Capital deployed by July 20 (minor delays)

- Paid ads perform as projected (₦1.50-2 cost per user)
- Korey delivers Phase 2 by mid-September
- Organic growth + paid ads balanced
- Premium conversion stays at 10-12%

## Projections

| Metric           | July  | Aug   | Sep   | Oct   | Nov   | Dec   |
|------------------|-------|-------|-------|-------|-------|-------|
| Users            | 50    | 150   | 400   | 800   | 1,500 | 2,500 |
| Premium Users    | 5     | 15    | 40    | 80    | 150   | 300   |
| Monthly Revenue  | ₦5K   | ₦15K  | ₦40K  | ₦80K  | ₦150K | ₦300K |
| Runway Remaining | ₦2.4M | ₦2.3M | ₦2.1M | ₦1.9M | ₦1.7M | ₦1.4M |

## Outcome by December

- 2,500+ users (on target)
- ₦300K/month revenue (sustainable)
- Korey productive, Phase 2 beta validated
- Can sustain for 4-5 more months without additional capital
- Ready to raise Series A seed in Q1 2027

**Probability:** 60%

---

## SCENARIO C: WORST CASE (Conservative, but Manageable)

### Assumptions

- Capital deployed by early August (process delays)
- Paid ads underperform (₦2.50 cost per user)
- Korey joins late (late August instead of July)
- User acquisition slower than expected
- Premium conversion stays at 8-10%
- One major bug or platform issue (month of low growth)

## Projections

| Metric           | July  | Aug   | Sep   | Oct   | Nov   | Dec   |
|------------------|-------|-------|-------|-------|-------|-------|
| Users            | 25    | 75    | 200   | 400   | 800   | 1,500 |
| Premium Users    | 2     | 8     | 20    | 40    | 80    | 150   |
| Monthly Revenue  | ₦2K   | ₦8K   | ₦20K  | ₦40K  | ₦80K  | ₦150K |
| Runway Remaining | ₦2.4M | ₦2.3M | ₦2.1M | ₦1.9M | ₦1.7M | ₦1.5M |

## Outcome by December

- 1,500 users (60% of target)
- ₦150K/month revenue (sustainable but tighter)
- Korey on team but maybe part-time
- Phase 2 beta smaller, needs refinement
- Still solvent, but need additional capital by Q1 2027

**Probability:** 20%

---

## KEY RISKS & MITIGATIONS

### Risk 1: User Acquisition Slower Than Projected

#### Mitigation:

- Pivot to partnership model (partner with banks, fintechs)
- Adjust ad spend based on real CAC data weekly
- Increase organic community-building efforts

### Risk 2: Korey Cannot Commit or Underperforms

#### Mitigation:

- Have backup developers identified
- Can hire freelance backend help on demand
- MVP Phase 2 can launch without all features

### Risk 3: Infrastructure Costs Higher Than Expected

#### Mitigation:

- Use managed services (AWS, Heroku) instead of self-managed

- Cut feature scope if necessary
- Scale gradually based on actual user load

#### **Risk 4: Payment Processing Issues in Nigeria**

##### **Mitigation:**

- Partner with Flutterwave, Paystack, Stripe for reliable processing
- Offer multiple payment methods
- Test payment flow extensively before launch

#### **Risk 5: Paid Ads Don't Convert**

##### **Mitigation:**

- Double down on organic (partnerships, community building)
- Reduce ad spend, focus on retention and viral growth
- Adjust messaging based on real user feedback

#### **Risk 6: Phase 2 Launch Delayed Past December**

##### **Mitigation:**

- Launch beta in November with smaller feature set
- Iterate with real users rather than waiting for perfect product
- Use user feedback to guide development priorities

---

## **MAJOR MILESTONES & SPENDING TIES**

### **July 1-15: Capital Deployment**

- Transfer funds to Nigerian account
- Set up accounting/tracking system
- Pay Korey first month (₦30K)
- Launch ad accounts (Twitter, Google, Facebook)

### **July 20-31: Korey Onboarding**

- Korey starts Phase 2 architecture
- Infrastructure upgrades begin
- First paid ads launch
- Initial performance tracking

## **August 1-31: User Acquisition Acceleration**

- Paid ads ramping to full budget
- Organic growth tracking intensifies
- Early data on what works (which audiences, messaging)
- Korey builds Phase 2 core infrastructure

## **September 1-15: Phase 2 Beta Launch**

- Limited beta (20-50 power users)
- Real-time alerts begin testing
- Dark web monitoring begins
- Gather user feedback and iterate

## **September 15-30: Phase 2 Refinement**

- Bug fixes based on beta feedback
- Expand beta to 50-100 users
- Prepare for public launch
- Analyze user engagement patterns

## **October 1-31: Scale Phase**

- Public launch of Phase 2 (optional, can stay beta)
- Expand marketing spend based on performance
- Premium conversion testing and optimization
- Korey builds Phase 3 foundation

## **November 1-30: Revenue Validation**

- Premium conversions tracked and analyzed
- Lifetime value calculated and refined
- Churn analysis and retention improvements
- Plan for Q1 2027 expansion

## **December 1-31: Year-End Review & Planning**

- Confirm 2,500+ users achieved (or close)
  - Revenue validation (₦100K+/month)
  - Phase 2 stability assessment
  - Decide: Raise more capital or bootstrap Phase 3
-

# WHAT CAPITAL ACTUALLY UNLOCKS

## Without Capital

- I freelance 20+ hours/week (splits focus from Tirenify)
- Growth is slow (organic only, manual outreach)
- Cannot afford Korey (Phase 2 pushed to 2027 or beyond)
- Takes 12+ months to reach 500 users
- Revenue remains at ₦0

## With £2,500 Capital

- I focus 100% on Tirenify (no freelance distraction)
- Paid user acquisition begins immediately
- Korey hired and productive (Phase 2 accelerates)
- 2,500 users achievable in 6 months
- Revenue reaches ₦300K/month by December
- Clear path to self-sufficiency

## The ROI

- **Capital Invested:** £2,500
- **Expected User Base by Dec:** 2,500+
- **Expected Monthly Revenue by Dec:** ₦300K (~£164)
- **Expected Annual Revenue (if growth continues):** ₦3.6M (~£1,970)
- **Timeline to Profitability:** December 2026 (self-sustaining)

Capital multiplies progress from months into weeks.

---

# ASSUMPTIONS & DEPENDENCIES

## User Acquisition Assumptions

- Twitter ads work (tested with limited budget)
- Google Search ads work (breach checker keywords have demand)
- Viral coefficient = 1.2 (modest word-of-mouth)
- Premium conversion = 10-12% (conservative for security SaaS)

## Technical Assumptions

- Korede can deliver Phase 2 by September

- Infrastructure scaling is straightforward
- No major security breaches or product issues
- Third-party APIs (breach databases, dark web monitoring) remain available

## **Market Assumptions**

- African market demand exists (validated through initial DMs, interest)
- Payment processing works reliably in Nigeria
- Regulatory environment stays favorable (NDPR compliance)
- No major competitor launches in Africa during 6 months

## **Financial Assumptions**

- Exchange rate stable ( $\sim 1 \text{ GBP} = \text{₦}1,823.92$ )
  - Freelance income helps cover shortfalls if needed
  - No major unexpected expenses arise
  - Payment providers remain functional
- 

## **CONCLUSION**

I have built a working product with zero capital. With £2,500-5,000, I can:

- Hire Korey and scale product development
- Invest in user acquisition
- Reach 2,500+ users by December 2026
- Establish sustainable revenue model
- Prove Tirenify is a real, solvable business

This isn't a request for a gamble. It's a request to accelerate what's already working.

The product exists. The problem is real. The market is ready.

Capital is the only missing piece.
